

## DESIGN PARTNER PROGRAM

# Be the first reproducible AI verdict — on defined terms.

We're selecting a small number of design partners to produce the first public, reproducible Cost-Per-Resolution verdicts on deployed AI. Going first should be easier than not. Here's exactly what it involves, what you get, and what we'd need.

[See the terms & apply](#)

## The deal, stated plainly

### What you commit

- One named AI use case
- De-identified data only
- 30–60 days
- One executive owner who can approve a pilot

### What you get

- An independent, reproducible CPR verdict, at no or reduced fee
- Direct input into the methodology
- Publish-optional — your logo only if you choose

## The catch

The verdict is reproducible and may be referenced as a (logo-optional) proof point. We never fake a result, and we never publish your name without your consent.

## Pick one pre-scoped pilot

Scoped to keep your effort small. One flow, one before-and-after, one verdict.

### COMMERCIAL

**A claims-deflection flow**

### COMMERCIAL

**A denial-rework flow**

### COMMERCIAL

**A tier-1 deflection flow**

### FEDERAL

**One veteran-facing virtual-assistant use case** (de-identified Impact read)

## Commercial lane

An ops leader at an insurer, health system, or BPO. A 30–60 day before-and-after on one live AI flow, on de-identified data. You see it work in weeks, not a nine-month queue.

## Federal lane

A scoped Impact read on a deployed, veteran-facing assistant — under the OMB M-25-21 monitoring mandate, on de-identified data, bought as a pilot slice under a prime. **See the federal brief →**

## Apply to go first

A few questions about scope and authority — not your operational numbers. The founder reviews every one.

[Apply to be a design partner](#)

De-identified data only. No PHI/PII to start. Terms governed by written agreement.

No client logos to show you yet. That's the point — no other operator to protect, and no result we've had reason to soften. **Go first, on defined terms.**
